# MyTutor
T02 Group 1

Overview:

MyTutor is an app to help connect you to a tutor for the classes you need.

Key Features:

1. Give students the ability to search for tutors by course or topic
2. Increase tutor comfort by matching them with students only in their area of expertise
3. Allow students and tutors to communicate with each other through a chat feature
4. Allow students and tutors to rate each other based on their experiences with the tutoring session
5. Platform built on trust and user feedback

Tutor Search:

Searching for a tutor should be as easy as typing in your course topic and clicking "go". To the right we have an image of a kijiji search. We hope to have the tutor searching experience be very similar to browsing on kijiji.

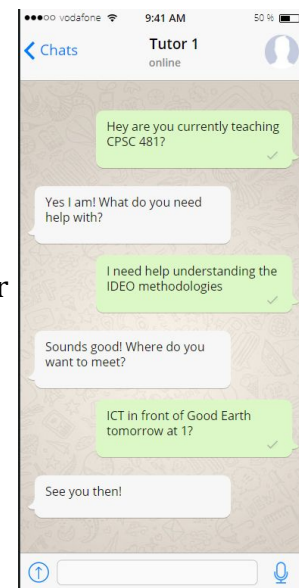

Appointment Chat:

Setting up appointments should be simple and conventional. To the right we have an image of a typical chatting system. We hope to have a similar accustomed experience for communication between tutors and students.

Tutor Rating:

The system should have a straight-forward rating system and tutor statistics that are easy to understand. Below is a picture from ratemyprof.com. We desire a rating system that looks and feels similar to rate my prof.
